MEANS AND TECHNOLOGIES OF MINE CLEARANCE:

The engineer units of the Armed Forces of the Czech Republic are equipped with the Midi-flail mine clearance system BOZENA 5 (hereinafter referred as BOZENA).
BOZENA is a tracked mechanical mine clearing machine remotely controlled by a transmitter with a range of 2,000 m, meant for clearing anti-personnel mines both pressure and tripwire fused and for anti-tank mines up to 9 kg of TNT charged. The system is suitable for clearing large mine affected areas. It can be road transported on trailer between working areas.
BOZENA is protected from detonations by an armoured shield situated at the front of the vehicle, directly behind the flail. In addition, the whole machine is protected with an armoured metal covering, giving protection against damage from detonations.

Matters pertaining to compliance and implementation not covered by the formal reporting requirements contained in Article 7

On 1 January 2016, the Military Training Area Brdy was abolished by Act No. 15/2015 of the Collection of Laws, on the border military districts. The process of search, detection and destruction of UXO in this area was completed.

Although Brdy Protected Landscape Area was established in January 2016, the entire area is not open to the public. There are six locations which will remain permanently closed, which include inaccessible target impact areas.

In this regard, on 9 October 2017 the Minister of Defence of the Czech Republic issued a Provision, which established temporarily no-go zones within the Military Training Area Brdy until 31 December 2018 due to their pyrotechnic reconnaissance. Once this reconnaissance is concluded there will be a new Provision issued cancelling these temporary no-go zones.
